

## SAVE TIME.

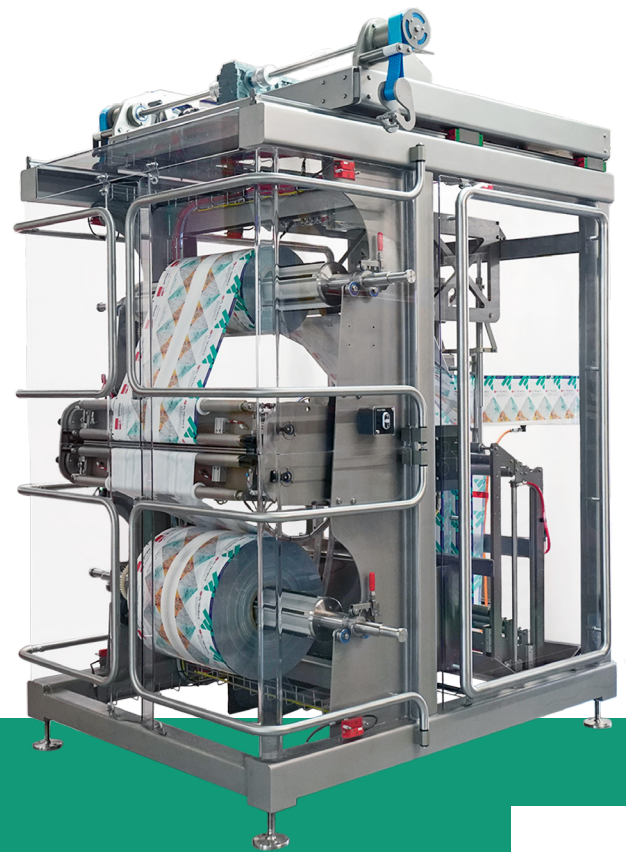

SAVE 5-10% OF CYCLES.

## CUT WASTE.

USE DRASTICALLY LESS MATERIAL.

## QUICK RETURN.

PROFIT IN JUST 3-6 MONTHS.

# FL AUTOSPLICER PRO

AUTOMATIC ROLL SPLICING SYSTEM FOR HFFS & VFFS MACHINES

F&T

FLEXIBLES  
& TRAYS

> Stop Losing Money with Manual Splicing. Automate It and Maximize Output.

The FL AutoSplicer Pro is a stand-alone system that automates roll splicing in horizontal and vertical pouch packaging machines, compatible with any manufacturer and requiring no equipment upgrades. This cutting-edge FLtècnics technology **saves businesses 5-10% of production time**, drastically reduces their material consumption, and lowers labor costs, offering a reliable solution with **visible profits in just 3 to 6 months**.

### KEY FEATURES AND BENEFITS

Setup is quick and easy so you can get the return of the investment in just 3 to 6 months of use.

Works seamlessly with vertical and horizontal Form-Fill-Seal machines of any supplier.

Efficient 24/7 operation saves 5-10% of production time and lowers labor costs.

Significantly reduces material waste, eliminates manual errors, and minimizes rejects.

Its continuous motion ensures perfectly positioned and tensioned film as well as accurate splice location.

Its protection doors with integrated sensors and anti-entrapment areas enhance operator safety.

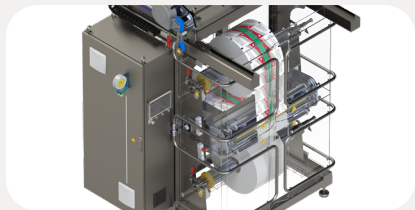

Button-controlled motorized roll elevator effortlessly lifts and positions rolls up to 240 kg (529 lbs).

Quality materials and a 3-year warranty ensures a long life cycle and minimal maintenance costs.

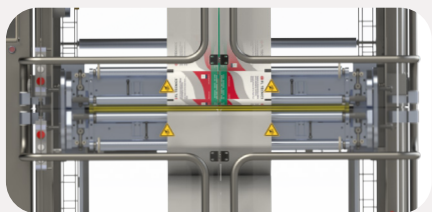

**MAIN FEATURES**

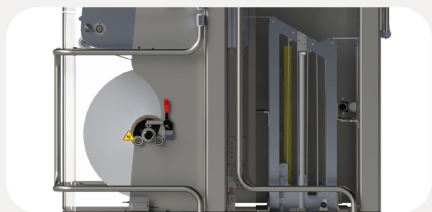

**A. ADVANCED SAFETY.** Its anti-entrapment areas and lightweight safety doors with sensors ensure greater operator safety.

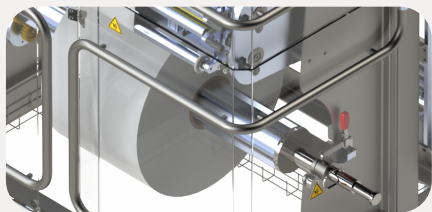

**B. FASTER AND EASIER ROLL POSITIONING.** Its motorized roll elevator activated via buttons in the chasis lifts rolls weighing up to 240 kg (529 lbs).

**C. ADAPTABLE AND EFFICIENT SPLICING.** Its autosplicing tables allow you to splice two rolls at roll end, at minimum diameter, and on demand.

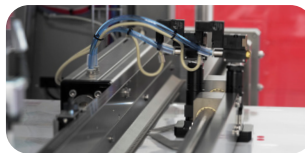

**D. PRECISE FILM CONTROL.** The dancer tracks film position for rejection, maintains max. film storage, and facilitates fast splicing while detecting any failures.

**E. ENHANCED ROLL MANAGEMENT.** Roll shafts control film tension, calculate roll end, and diameter to determine the remaining film.

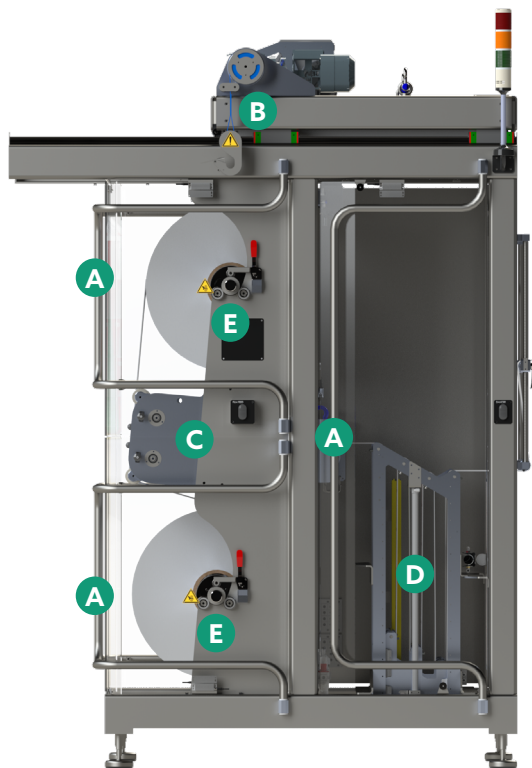

**OPTIONAL FEATURES**

**PERFORATING UNIT.** Create quality shapes and holes at high speeds.

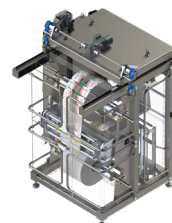

**PRINTER.** Apply dates, batch numbers, and barcodes directly onto pouches.

*\*Footprint and element placement may vary based on specific customer requirements.*
